SUND  BIRSTA

We increase your productivity.

# Help is always close at hand with digital service tools

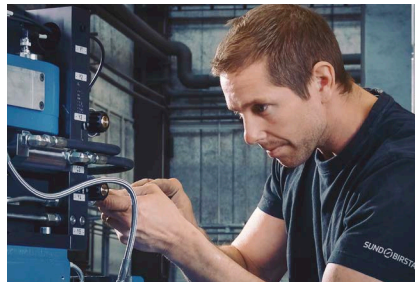

We offer digital service tools that make great distances insignificant. Thanks to our Internet of Things (IoT) solution our specialists can perform online diagnostics and troubleshooting of your equipment. Our solution also enables continuous collection of production data, which makes it possible to improve preventive maintenance and optimization. Furthermore, our customer service department can make customized offers for products and services based on your unique application.

Sund Birsta equipment is prepared for Sund Connect™.

## Remote support

Sund Connect™ makes great distances insignificant by enabling product specialists to perform online diagnostics and troubleshooting of your equipment.

## Predictive maintenance

Based on data from your production and machine diagnostics our customer service department can offer you the best components/spare-parts and services and minimize your downtime.

## Diagnostics tools

The Sund Connect™ diagnostics tool enables you to analyze production data from the equipment both historically and in real-time. This gives operators, maintenance personnel and management the ability to track both key-variables as well as the overall performance of the machine.
