

Product sheet

Tag marker

Tag marker for long products.

Maintenance and upgrades

As the system is delivered with a service package, wear, spare parts, service and design updates are included. This sets low cost of ownership and assure a high accuracy for the function. Key components are easy and fast to swap, and then to be sent to nearest Sund Birsta service workshop.

Label attachment

The label attachments shape is flexible. This allows the system to adapt to our customers needs and various product range. This to ensure the reliability and secure that the tag is attached through the complete chain of delivery.

Operation

The system can be controlled via HMI or connected to local/customers level2 system. The operator can adjust all flexible parameters easily. Options as an example can be how many tags attached to one product, position where to attach the tag and redundant position etc. Production data and performance are presented on HMI.

Predictive maintenance

Utilize data from presence to learn when your system needs service and maintenance, to prevent any loss of production and non-planned stops.

Remote support

With remote connection our full know-how can be utilized as a support.
